

Vibe Coding – Tasks 1–4 Chat History

The transcript below contains the task-related conversation for the Maze Chase Vibe Coding work, in chronological order.

Task 1

User: let's do task 1

Assistant: [The Task 1 implementation was provided in the conversation: game_engine.py was changed to use self.enemies with three Enemy instances, update all enemies independently using BFS, check collision against any enemy, and draw all enemies.]

User: yes there are 3 enemies task 1 works

Task 2

User: let's do task 2

Assistant: [The Task 2 implementation was provided in the conversation. It added start_time and speed_tier, increased the speed tier every 15 seconds, reduced enemy move_interval by 2 per tier with a minimum of 5, and displayed the speed tier in the HUD.]

```
elapsed = pygame.time.get_ticks() - self.start_time
new_tier = elapsed // 15000 + 1
if new_tier != self.speed_tier:
    self.speed_tier = new_tier
    new_interval = max(5, 20 - (self.speed_tier - 1) * 2)
    for enemy in self.enemies:
        enemy.move_interval = new_interval
```

User: Task 2 works.

Task 3

User: let's do task 3

Assistant: [The Task 3 implementation was provided in the conversation. It added a yellow power pellet, collision detection for collecting it, a five-second freeze state for enemies, and a frozen visual indicator.]

```
# Task 3: Power pellet
self.pellet_rect = pygame.Rect(
    pellet_col * CELL + CELL // 2 - 8,
    pellet_row * CELL + CELL // 2 - 8,
    16, 16
)
self.pellet_active = True

if self.pellet_active and self.player.rect.colliderect(self.pellet_rect):
    self.pellet_active = False
    for enemy in self.enemies:
        enemy.freeze()

self.frozen = False
self.frozen_until = 0

def freeze(self):
    self.frozen = True
    self.frozen_until = pygame.time.get_ticks() + 5000
```

User: the pellet is appearing only in the EXIT, so I can't verify it

Assistant: explained that the pellet was initially placed at the same center cell as the exit and recommended moving it to a different cell, eventually using pellet_col = 2 and pellet_row = 0 so it would be easy to reach.

User: done it works

Task 4

User: yes it works let's do task 4

Assistant: Great. Let's do Task 4: Score by Distance. According to the README, the requirement is: Score increments every frame the player is alive. HUD shows Survived: Xs where X = score // 60. Final score appears on the game-over overlay.

User: [pasted the complete current game/game_engine.py and asked:] Update it and give me full code

Assistant: [Provided the complete updated game_engine.py with self.score = 0 in reset(), self.score += 1 while the player is alive, the HUD displaying Survived: {self.score // 60}s, and the final score displayed on the game-over overlay.]

```
# Task 4: Score by distance
self.score = 0

# Task 4: Increase score every frame while player is alive
self.score += 1

# Task 4: Show speed tier and survived time
f"Survived: {self.score // 60}s  R=Restart"

# Task 4: Show final score
final_score = self.font.render(
    f"Final Score: {self.score}",
    True,
    (255, 255, 255)
)
```

User: yes it works

End of Task-Related Conversation

All four README features were implemented and tested successfully: Multiple Enemies, Speed Up Over Time, Power Pellet / Freeze Enemy, and Score by Distance.
